

unimate.study

AI-Powered University Guidance for International Students

Executive Summary

Navigating the university admission landscape in Germany can be a daunting process for international applicants. Requirements, deadlines, and prerequisites vary drastically between institutions and federal states. **unimate.study** is conceived to bridge this gap, offering a highly intelligent, agentic AI platform that simplifies the discovery and application process for prospective students worldwide.

By deeply analyzing a student's academic background, language proficiencies, and career aspirations, UniMate delivers tailored recommendations, effectively democratizing access to German higher education.

Core Features & Architecture

UniMate is not merely a search engine; it is a dynamic, conversational agent capable of complex data processing. The system relies on a multi-agent workflow to parse unstructured university data and align it with individual student profiles.

Intelligent Matching Engine

Utilizes advanced Large Language Models to evaluate a student's prior degrees, GPAs, and language certificates against the specific requirements of German universities, presenting the most viable paths for admission.

Automated Admission Data Processing

Continuously aggregates and structures complex admission guidelines, program catalogs, and deadline information, ensuring applicants have access to up-to-date and highly accurate institutional requirements.

Interactive Agentic Guidance

Operates as a conversational counselor, allowing prospective students to ask nuanced questions about their eligibility and receive immediate, contextually aware responses powered by a robust retrieval-augmented generation (RAG) pipeline.

Technology Stack

The platform is architected for scalability, speed, and deep reasoning, leveraging a modern AI and web development ecosystem.

Powered By

Python

FastAPI

LangGraph

Supabase

Gemini Models

Agentic AI

The multi-agent system heavily utilizes **LangGraph** to orchestrate stateful AI workflows, while **FastAPI** provides a highly performant backend framework. Data and vector embeddings are securely managed via **Supabase**.

Project Origins & Vision

Developed at the intersection of Data Science and real-world educational needs, UniMate is driven by the firsthand understanding of the complexities international students face when targeting German institutions. Rooted in the academic environment of the University of Greifswald, the project aims to scale into a definitive, reliable tool that removes the friction from international mobility and academic advancement.
